## HOW TO BE AGILE

Our company follows the Agile approach to software development. We use Scrum methodology for most projects to deliver top-notch solutions.

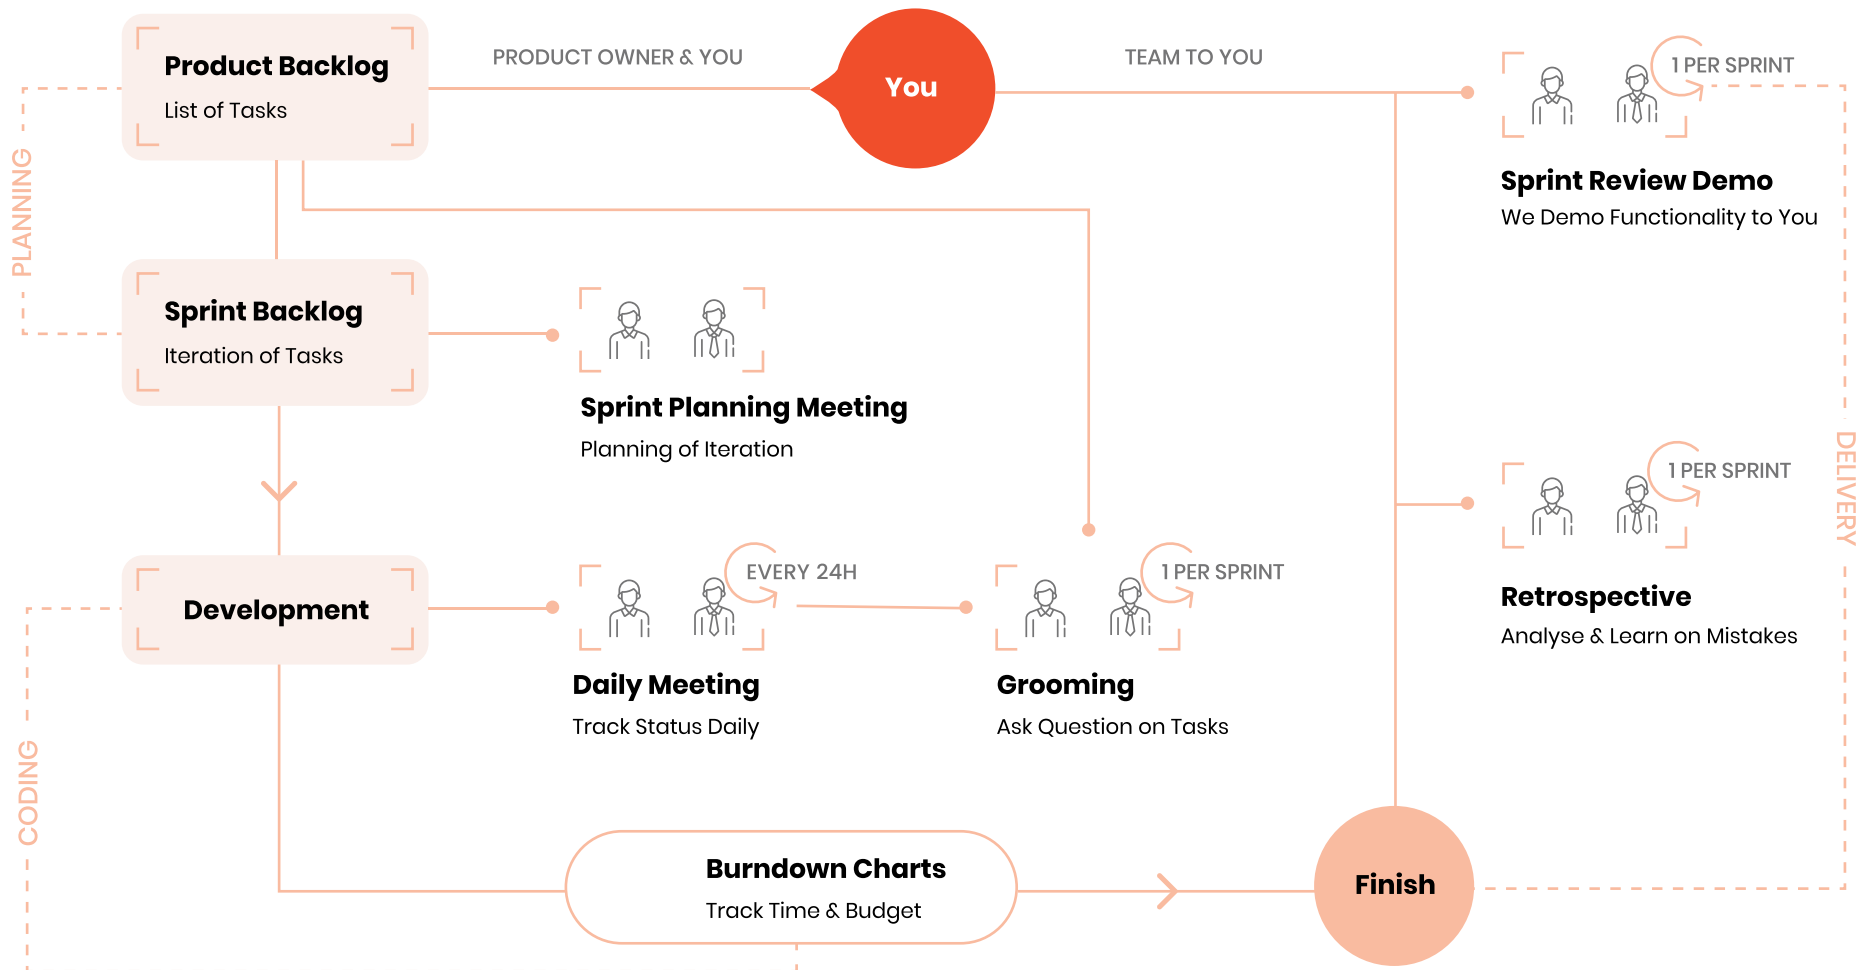

Advantages of using Scrum:

- Quick start
- Frequent releases
- Process transparency
- Possibility to add changes
- Advanced quality
- Improved risk control

But we still select a methodology that suits best for your project depending on your business needs and requirements. And no matter whether it is Scrum, Kanban or Waterfall we will make sure to meet your deadlines and expectations and to keep you updated on the project progress.

# AGILE SCRUM FRAMEWORK

10.

# YOUR PROJECT CYCLE AT TECHIGATOR

1

## Initial Preparation for the Project

- We select team members
- We define a methodology
- We select tools and technologies
- We/You sign the agreement
- You submit the first payment

2

## Planning and Setting Up

- We arrange a Project kick-off meeting with You
- We create a product backlog (You may take part in this process if needed)
- We build the initial release plan
- We set up infrastructure
- We create wireframes and design

3

## Development Sprints

- We develop a feature-set within 2-4 weeks (a sprint)
- We send You demo at the end of a sprint
- You review it and approve the sprint deliverable
- We start next sprint right away

Marketing

# HOW TO ENGAGE WITH TECHIGATOR

- 1 Services are provided on a time and materials ("T&M") basis. This means that clients shall pay for the time our team spends on delivering such services at the end of each calendar month. The exact date of invoicing can be discussed separately.
- 2 For each service engagement, we sign an agreement that includes a list of specialists with their hourly rates and the period during which the service will be provided.
- 3 We make and provide payment schedule.
- 4 Hourly rates include the infrastructure our team requires to perform the tasks.
- 5 Holidays and sick leaves of team members are not invoiced as working time.
- 6 If some team members take a vacation, we'll try to cover them up by assigning other specialists for that time (provided that it is needed for the project and makes sense considering the time required for integration).
- 7 Hourly rates can be changed only after confirmation with a client. Rates may be increased during the project only if the level of the specialist increases. In this case, we ensure that his performance and, thus, the value for the project increases as well.

# CLIENTS **REVIEWS**

“ My Project with Techigator gave me the ability to develop my software while keeping a busy schedule. Ana, who was my project manager, was very professional and was always understanding of my vision and what I wanted. I would recommend Techigator again to any other company or person who has a vision for their web application. Thank you Techigator!

**Raphael** 🇺🇸  
Founder and CEO at Zivugtech

“ I've been using Techigator for the past 3 years and they have been great. Communication is unparalleled to other app development companies. I've continued to return to them to improve my iOS app countless times and I will continue to do so in the future. I highly recommend this company!

**Aaron** 🇺🇸  
Founder, Owner of Aviation Study Guide App

“ Techigator performance has been very strong. We've referred them twice, which says all anyone needs to know about them. A referral is the ultimate signal we can give that these guys are great.

**Dave** 🇮🇪 🇮🇪  
Founder at Segmatic

“ I think they do great work. I haven't yet given them something that they were unable to do.

**Andy** 🇺🇸  
Founder & President of PEI Services

14.

# CLIENTS **REVIEWS**

Techigator is the company that understands all your business needs and complexities, and provides a perfect solution addressing them on time and on budget. The team is not scared of the most unusual ideas, and treats them as challenges rather than obstacles. I'm glad that I found this company and ended up with the best possible solution at my hands.

**Martin**

CTO, Chief of Operations and Finance

They write clean code, adhere to deadlines, and communicate extremely well. I strongly recommend anyone from the Techigator agency and hope to work with them again myself.

**Devan**

Software Engineer at Stitch Fix

Techigator pleasantly surprised me since, unlike other offshore developers, they provided well written and detailed tech documentation. Their level of communication was very impressive, and they always kept me updated on the progress. The team is very good at time&costs estimations, and processes organization. I would highly recommend them to anyone for any size project.

**Ryan**

Chief Technology Officer at SOLJETS

They consistently delivers outstanding results. Their proficiency and problem-solving skills make them a reliable choice for any project. I've been thoroughly impressed with the quality of their work.

**Garrett**

CTO & Co-Founder at Nimble Metrics

# MOBILE APPLICATION PORT RESCUE

## Main Features:

- Quick search
- Translation of common phrases into world languages
- Offline work

If you are a traveller and don't speak lots of foreign languages you probably faced a problem when you are trying to explain something to non-English speaker but the only thing you see on the face of a recipient is confusion. And this application is a travel guide for you in communication with people in the hotel, restaurant, etc.

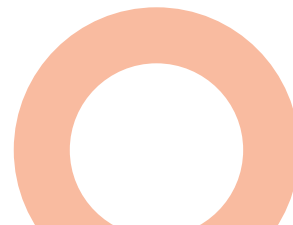

In order for the application to be really useful, it should work offline since not all travellers can go online

# MOBILE APPLICATION DROPHOOK

## Main Features:

- Instant messenger
- Facebook sign up
- Video and photo posting
- Likes and commenting
- Tournaments
- Map
- Weather forecast
- Tackle store
- Newsfeed
- In-app purchases and payments

When it comes to fishermen, they love to boast their catch on social networks to people who have the same interests. Now, they have new tools that not only allow social sharing, but also include weather maps/radars and forecasts to find favorable fishing times, updates and tips on the best tackle to use, tournaments to participate and compete in, a fish measurer to track their catches and compare their achievements to others, in-app purchases for added benefits and a whole lot more. This really is an innovative and unique application that combines all the features of location based apps, social networks and ecommerce stores.

# MOBILE APPLICATION PRIMO

## Main Features:

- QR scanner
- Shopping cart
- Realm
- Wishlist

You know how hard shopping can be. With that in mind, Primo is aiming to make the experience of shopping easy and quick for you. All you need to do is open the app and **scan the tag of the product**. From there, you can see its price, description, variations, and then add it to your shopping cart and check out. The user-friendly calculator will show you the total price of all products added to the cart and the cost of shipping the items.

 **508**  
development  
hours

 **402**  
development  
hours

The banner features four smartphone screens displaying the Primo app interface: 1. The app's splash screen with a red background and a white QR code icon above the word 'PRIMO'. 2. A product detail page for a 'Timeline Photo' showing a coffee machine and a cup. 3. A shopping cart page with a total of \$299 and a 'CHECK OUT' button. 4. A list of items in the shopping cart, including 'Ikea Storage Table Assorted Colors', 'Nespresso Lattissima Touch', 'Christian Louboutin Rollerboat', 'Dyson 360 eye', and 'Apple Watch 42mm Stainless'.

# MOBILE APPLICATION FLASHBAKC

## Main Features:

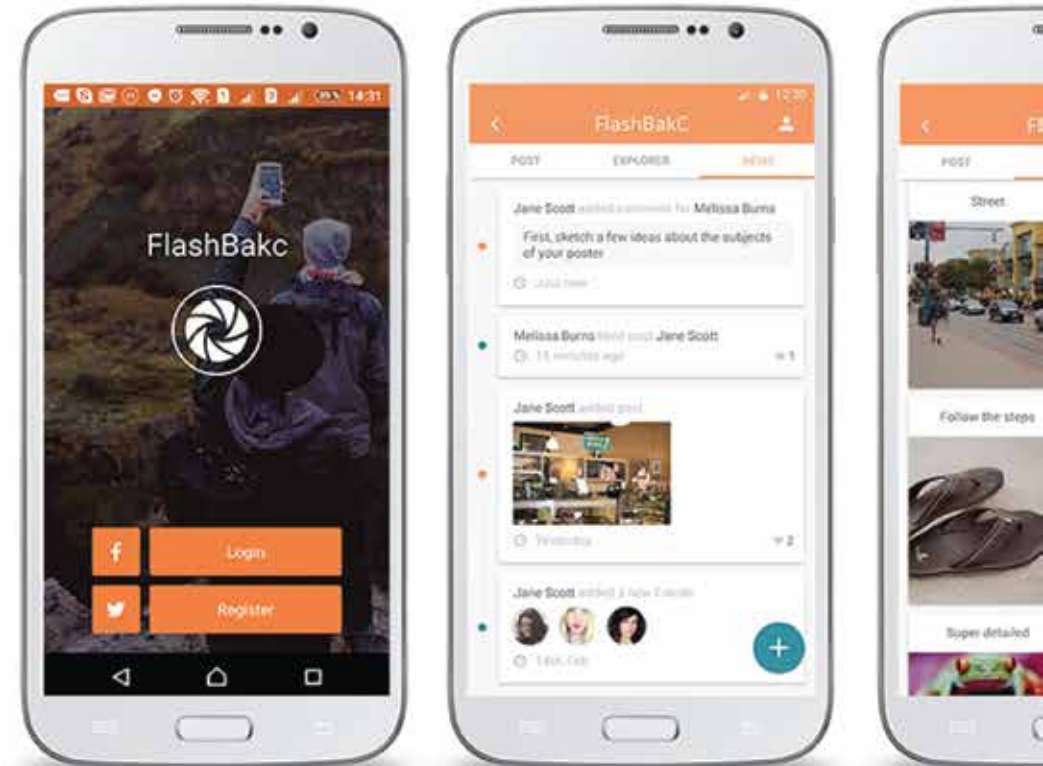

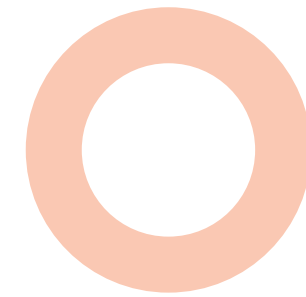

- Likes
- Comments
- Video, photo and audio posts
- Newsfeed
- Facebook sign,login
- Twitter signup,login

"FlashbakC" is an effective and hilarious way to share your videos of 15 seconds in length. It not only shares the video, but also captures shots for merging the video. One of the challenges that social media apps face is gaining a big target audience quickly. Thanks to Facebook and Twitter, logging into this has become really easy.

You can hardly imagine using a social network without such functionality as likes and commenting, "FashbakC" is no exception to the rule, making interaction and user involvement better. Thanks to this, users spend more time in the application checking for responses to their own comments. And tracking of this has never been easier thanks to the functionality of a timeline.

# MOBILE APPLICATION SPARKLE

## Main Features:

- Instant messenger
- Facebook signup
- Emojis
- Photo sharing
- Location
- Push notifications

Sparkle aims at making the time killer process not only fun, but also useful. Find public chats going on nearby or at your exact location and join in on the fun. You can **create as many chats** as you want on any subject you want and just keep on posting to them.

This application is easy to join, thanks to a convenient Facebook login. But you can also select the regular sign up process without having to fill in really long forms. You can add chats to your favorites for future communications, create your own and define **the radius of people who can join from your location** or a nearby one. Media posting and emojis will make the whole process of using the app even better.

## MOBILE APPLICATION UPUZZLE

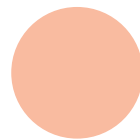

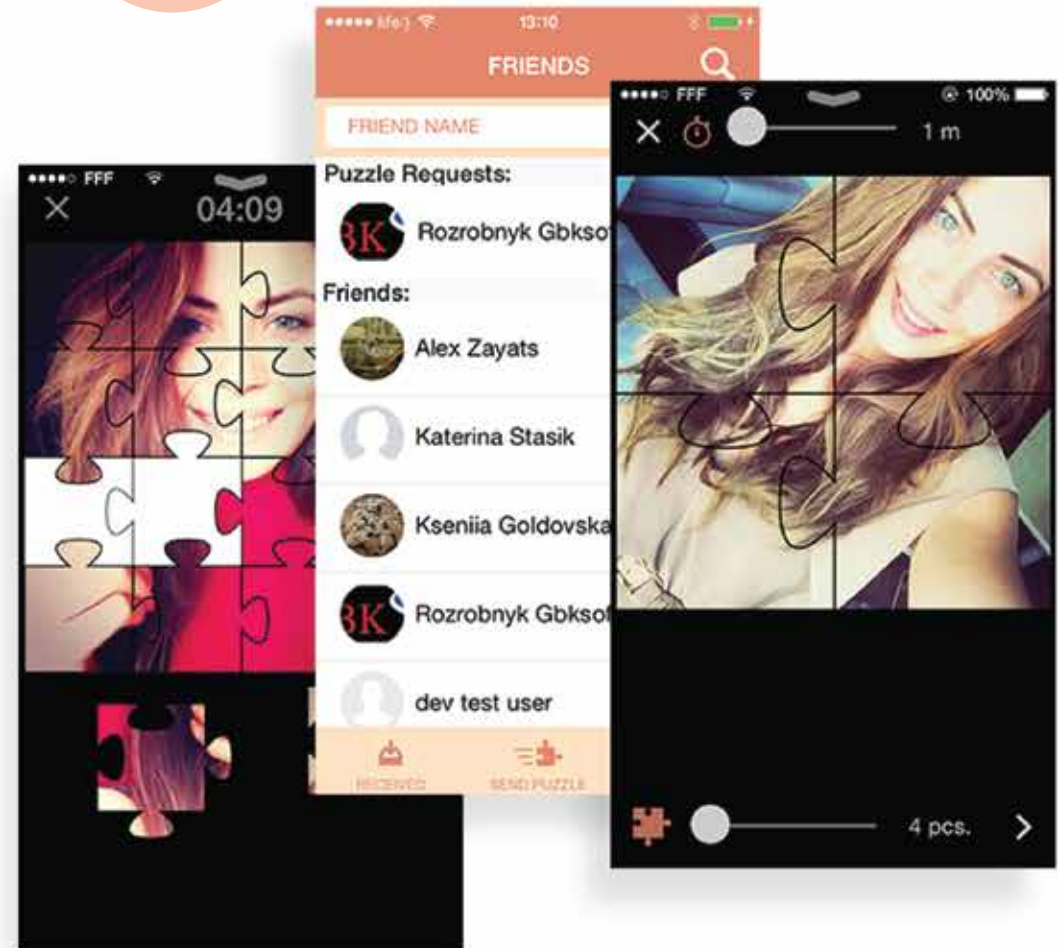

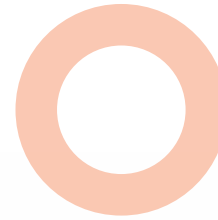

### Main Features:

- Creation of a puzzle
- Sharing
- Facebook signup
- Adding friends
- Notifications

uPuzzle is an interactive mobile application that allows you to take a photo and make a puzzle out of it. The agile settings allow you to set the number of pieces for the puzzle and a time limit. Once you have your puzzle set up, challenge your friends by sending it to them. You can also try to solve their picture puzzle and see the photo they created. The app includes an intuitive and smart algorithm of puzzling with random borders, which was developed using the fast working methods of saving and displaying that were available for different types of devices and operating system versions.

# MOBILE APPLICATION LABBAYO

## Main Features:

- QR scanning
- Multilanguage
- Audio recognition

Labbayo was created to teach children how to speak and pronounce native words correctly, as well as to start them on learning a foreign language as early as possible. The application comes together with beautifully drawn flash cards that make the process of learning fun and interesting, while also keeping the child interested for as long as possible. A child has to scan the flashcard and hear the pronunciation of the word. Next, they have to repeat it. If they pronounce it correctly, the application gives them a reward. If they mispronounce it, they are encouraged to try again.

development  
hours

# MOBILE APPLICATION APACHE HELICOPTERS

## Main Features:

- PDF reader
- Flashcards
- Forum

The "Aviation Study Guide" app is the place where you can find all possible info on AH-64D and UH-60A/L. Once you've obtained and studied the information you were looking for and you want to check your knowledge; the application suggests using the flashcards to check how well you studied. It features nice shuffling and easy to use options. By answering the question you can top score. Forums and community publications will be a helpful tool to ask for what you were not able to find. The initial application was submitted to Apple Store with really basic interface, however we have reworked it into more beautiful with time.

# MOBILE APPLICATION & WEBSITE

# SNAPCHUR

## Main Features:

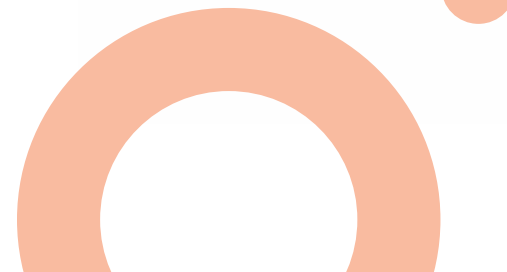

- Media filters
- Video, photo posts
- Payment system
- Ads
- Profiles

Snapchur is a photo based application that allows you to edit, enhance, tag your photos and share them to the most popular social networks. This is a perfect alternative to Instagram but apart from being just the photo based application it's also a great marketing tool that allows you to actually earn money by posting your photos and getting the ad clicks from them. Application is a possibility to form your own community by posting photos and video snaps, applying filters to it, enhancing contrast and brightness, commenting posts from other people, re-posting existing videos and pictures. Snapchur is also available in its web version.

## WEBSITE **SURF & YOGA**

### Main Features:

- Payment integration (Stripe, PayPal)
- Calendar
- Google Maps
- Social signup/login
- Messaging system

### Technologies

PHP  
Yii

The mission of this project is to connect like-minded people so that they can share their experience in Yoga and Surfing. The rich community offers a unique experience and the functionality of the web platform features the registration of profiles that best highlights your experience as a trainer or as a student. The biggest benefit is that all instructors can indicate their availability; and based on their calendar users can book the classes, pay for them, cancel and receive a refund, and chat with instructors they are interested in. The agile review and feedback system ensures that all instructors are to the highest standards.

# WEBSITE URVISIBLE

## Main Features:

- Analytics
- Networking
- Drag & drop website builder
- Payment systems
- Domain attachments

## Technologies

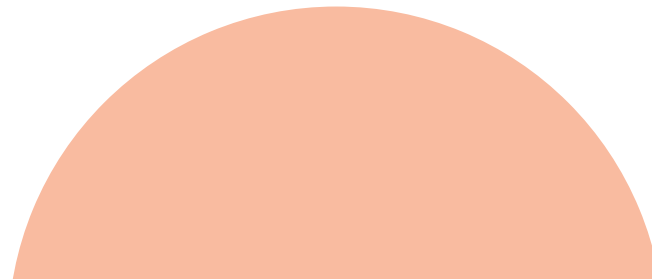

- PHP (Codeigniter framework)
- JavaScript
- jQuery
- Custom APIS
- Phantom.js
- Piwik

URVisible makes it simple to create a mobile-ready website with no experience in coding, design or even SEO. The easy-to-update tool has drag-and-drop features such as photo galleries, videos, customizable web forms, maps, social media links, testimonials, mini networks and more. It also ensures that your website is search engine friendly by using the latest standards of website coding.

URVisible also gives you the ability to edit your search engine information, including your title, keywords, and description information at any time. Once the user is ready to design their website, URVisible suggests that you pick a nice looking URL or attach an already-bought domain to the ready solution. Being a SaaS platform, URVisible incorporates online features like sharing, networking and resellers' features.
